PLUMS

Plums are not difficult to grow, and are among the hardiest of our fruits, besides offering the advantage of a large yield of fruit from a small plat of ground, as they can be planted close together.

Cherry Plum—Very hardy, fruit small with cherry flavor, of good quality.

Cheney—Fruit large, sugary. Very productive. Red shaded yellow.

Forest Garden—An ideal plum; very large, early and profuse bearer; rich and sweet.

Surprise—Deep red; excellent quality.

PRICE of above Plum trees: 5 to 6 foot trees, 50 cents each.

HANSEN HYBRID PLUMS

If you want an abundance of delicious plums be sure to plant a few Hansen Hybrids. They come into bearing young and are extremely productive.

Sapa—Fine for eating from the tree or for preserving. Skin thin; color purple, turning very dark when ripe. Hangs well to tree after ripening.

Hanska—Bright red, with blue bloom. Good for preserving and one of the best plums for eating from the tree.

PRICE of Hansen Hybrids, Sapa or Hanska: 5 to 6 foot trees, 75 cents each.

CHERRIES

The Cherry is one of the most attractive of our fruits. No farm is too large or city lot too small to have at least one cherry tree. The Cherry is a prolific and almost annual bearer, and will bring large returns for a small outlay.

Early Richmond—Dark red; juicy and productive.

Large Montmorency—Large; red; valuable and productive.

PRICES of above Cherry trees, 4 to 5 feet: 35 cents each.
